

# Reliable Connectivity Solutions for Utilities

## High Power User Equipment Extends Connectivity

With utility companies operating across wide-ranging service territories and in remote locations, connectivity is a constant challenge. Equip service vehicles, field crews, and substations with the highest-power router available to ensure a strong, reliable signal. Airgain 5G HPUE solutions deliver robust data, voice, and video connectivity in areas where standard equipment falls short.

High Power User Equipment (HPUE) is a specialized class of cellular device offering up to 6x the uplink power of standard devices. AirgainConnect® MegaFi 2 and AirgainConnect® MegaGo 2 HPUE routers maintain a dependable cellular link to the macro network and extend that connection into a secure Wi-Fi hotspot for your teams in the field.

## On the Job, In Touch Data, Voice, and Video Keep everyone connected, all the time

Keeping field crews and operations teams connected on the job supports safety and helps crews maintain service continuity efficiently. The MegaFi 2 transforms every utility vehicle into a powerful Wi-Fi hotspot—even in remote or hard-to-reach areas. When working in rural regions, rugged terrain, underground facilities, or other locations where cellular signals are weak or blocked, Airgain HPUE routers dramatically improve the chances of staying connected.

# Take the Deadspot Challenge

## Put our routers to the test!

- Sign up on our [Utilities page](#). Be sure to include the zip code where your trial will take place (if in U.S.).
- Our demo team will work with you to plan your test drive and show you how to set up the device(s).
- We'll send or drop off the demo unit(s), providing you the support you need to properly operate the unit and see the performance.
- Test coverage in your dead spots for the next 21 days. During that time, we will gather data from the unit (remotely).
- At the end of the trial period, we'll follow up with a performance report and collect the demo unit.

### MegaFi 2 Fixed

### MegaFi 2 Mobile

### MegaGo 2

## Why do you need to connect?

### Vehicle Mounted • Fixed • Portable

- Remote worksites, such as canyons or riverbeds
- Underground garages
- Trucks servicing rural locations
- Remote meter reading
- Transformer monitoring
- Tank level monitoring
- Emergency power restoration
- Smart Grid monitoring
